

Michael Kupfer

Forward Deployed Engineer · AI Engineer

Tel Aviv | 050-8883215 | michaelkulhs@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

Forward Deployed Engineer at Wonderful (via HMS), deploying production AI agents into enterprise customer workflows that handle hundreds of live conversations a day. Full-stack background (Next.js, TypeScript, Python); owns delivery end to end — client discovery, agent and integration architecture, testing, launch, and production debugging. Built Voxly, a voice-AI agent platform, and several LLM systems from scratch.

EXPERIENCE

Forward Deployed Engineer · Wonderful (via HMS) · Tel Aviv Aug 2026 – Present

- Design, build, and ship production-grade AI agents (voice and chat) for enterprise customers — agent logic, tools, prompts, and guardrails — serving hundreds of end-customer conversations per day.
- Own technical delivery end to end: workflow discovery with client stakeholders, architecture, integration with client CRMs, APIs, and data sources, test coverage, production launch, monitoring, and continuous iteration.
- Debug and harden agents in production: analyze conversation logs and recordings, reproduce edge cases, fix tool-calling, integration, and prompt-behaviour bugs, and ship improvements that raise resolution quality and reliability.
- Act as the technical point of contact for the client: run working sessions with their engineering and business teams, translate requirements into agent behaviour, and resolve data-access, governance, security, and performance constraints.
- Build evaluation scenarios, regression tests, and hand-over documentation so client teams can own and extend the agents long term.

Computer Science Tutor & Grader · SCE Academic College 2023 – 2026

- Tutored and graded Intro to CS, Deep Learning, OOP, Data Structures, and Algorithms (Java & Python).

Control Room Operator (part-time) · EAPC 2019 – Present

- Real-time monitoring of pumping systems and pressure telemetry in a 24/7 control room; incident response and escalation. 6+ years of reliable service alongside my degree and engineering work.

SELECTED PROJECTS

Voxly — AI Voice Agent Platform · Full-stack / AI · private repo, demo on request 2026

- Built and deployed a platform (Next.js, TypeScript, Supabase) that turns a natural-language prompt into a live voice AI agent, using OpenAI Structured Outputs + Zod as a deterministic configuration compiler targeting Vapi.
- Immutable, versioned agent configs with archive/restore; Twilio outbound calling and Cal.com booking wired into the agent's tools; idempotent, authenticated webhooks; 621 Vitest tests across 77 files; deployed on Vercel.

Airport Investment Intelligence Agent · Tool-calling analytics agent · Python, OpenAI Responses API, Streamlit 2026

- Chat agent that ranks, compares, and profiles 227 U.S. airports on capacity-pressure and congestion KPIs; the LLM selects tools and explains evidence while every number comes from deterministic Python over validated BTS snapshots.
- ETL over BTS T-100 and On-Time Performance data with atomic last-known-good publishing, lazy route caching, evidence cards with sources and assumptions, optional voice input; 331 offline pytest tests with fake OpenAI clients.

GTM Intelligence Agent · Multi-agent pipeline · Python, LangGraph, Claude API, Tavily 2026

- 4-agent LangGraph pipeline (Researcher → Scorer → Strategist → Copywriter) that turns a company name into a scored, tiered lead with an outreach strategy and a personalised 3-email sequence; tier gating cuts wasted LLM calls.

DipSignal — S&P 500 “Buy the Dip” Platform · Next.js, TypeScript, Vercel Cron + Blob 2026

- Scores 4 dip indicators (Fear & Greed, VIX, S5FI breadth, consecutive red closes) against ~2 years of history; scheduled pipelines with fallback data sources, bilingual EN/HE UI, no persistent backend.

Additional: Mini RAG (bilingual Hebrew/English RAG over TXT/PDF, Gemini embeddings) · WorkScheduler (React/Express/MongoDB shift scheduling) · StockPulseAI (LSTM financial forecasting) · Trussify (GNN-based structural design, final project)

TECHNICAL SKILLS

AI & LLM: OpenAI API (Responses, Structured Outputs, tool calling), Anthropic API, LangGraph, RAG & embeddings, Vapi, prompt design, agent evaluation

Languages: TypeScript, JavaScript, Python, Java, SQL

Web & Backend: Next.js, React, Tailwind CSS, Node.js, Express, Streamlit, REST, webhooks

Data & Infra: PostgreSQL, Supabase, MongoDB, Pandas, Vercel, Docker, Git

Testing & Tools: Vitest, Pytest, Zod, Pydantic, Cursor, Claude Code

EDUCATION & OTHER

B.Sc. Computer Science · SCE Academic College of Engineering · GPA 90 · 2022 – 2025

Military: Combat Soldier, Artillery Corps, IDF · **Volunteering:** Mentor at Aharai, preparing teenagers for military service

Languages: Hebrew (native), English (professional working proficiency)
