

Michael Kupfer

Tel Aviv | 050-8883215 | michaelkulhs@gmail.com | [LinkedIn](#) | [GitHub](#)

Full Stack Engineer with a strong academic foundation and hands-on experience from multiple end-to-end projects. Background includes tutoring in Intro to Computer Science and Deep Learning courses, reflecting solid technical understanding and communication skills. Values clean code, maintainable design patterns, and thoughtful user experience, and is motivated to contribute to high-quality, scalable products.

Technical Knowledge

Languages: Python, Java, JavaScript: Used for over 15k LOC across AI models, backend APIs and client logic.

Backend: Node.js, Express, REST APIs.

Frontend: React, HTML, CSS.

Databases: SQL, MongoDB.

Machine Learning: TensorFlow, PyTorch, Scikit-learn.

Tools: VS Code, IntelliJ, PyCharm, Jupyter Notebook, GitHub, Git.

Experience

Computer Science Tutor SCE Academic College

2023 – Present

Tutored students in key courses: Intro to CS, Deep-Learning, OOP, Data Structures, Algorithms.

Specialized in simplifying abstract topics and building exam strategies.

Projects

Weather Analytics Web App - Full Stack Developer -Self-Initiated

11.2025-01.2026

- Developed a Node.js + Express application consuming real-time weather API data.
- Implemented caching to improve performance and reduce external API calls.
- Added user preference storage (favorite cities) and a simple Weather Score feature.
- Deployed on Render for public access and reliability testing.

Trussify - Final Project SCE Academic College- Neural Network

10.2024- 09.2025

- Built ML models (Random Forest and Neural Networks) to support structural design automation.
- Created dataset of 1,000+ truss configurations and engineered GNN compatible data structures.
- Built a full demo app with backend integration and hyperparameter tuning via Optuna.

StockPulseAI – Machine Learning Personal Project

03.2025-06.2025

- Developed an LSTM forecasting model for financial time series.
- Applied feature engineering and hyperparameter tuning for improved accuracy.
- Built an interactive dashboard for analysis in Jupyter.

Work Scheduler App - Full Stack Developer -Self-Initiated

01.2025-06.2025

- Built a MERN-based scheduling system with authentication and role-based access.
- Implemented business logic and data models in Node.js + MongoDB.
- Designed a responsive React UI for shift management and user allocation.

Education

B.Sc. Computer Science

SCE Academic College of Engineering | GPA: 90 | 2022–2025

Military Service

Fighter at Artillery Corps

Volunteering

Aharai- mentored teenagers preparing for military service through physical training and guidance.
